DJ SERIES

DRUM LOUVRES

Application

Colman's DJ Drum Louvre terminal has been specially designed to ensure that long throws can be achieved at relatively low noise levels.

Description

The DJ Drum Louvre terminal product is ideally suited for exposed duct or sidewall installations in environments such as leisure centres, factories or warehouses.

The vanes are fully adjustable to give a full spread and directional control which enable the diffuser to be set-up for optimum conditions in both heating and cooling modes.

Fixing

The diffuser can be supplied in natural Mill finish, satin anodised or powder coated to an available colour within the RAL/BS range.

Fixing through the flange with countersunk screws (not provided by Colman) is the usual installation method.

DIMENSIONS, OPTIONS & ORDER CODES

Drum Jet Diffuser Dimensions

SIZE	DIMENSIONS (mm)						WEIGHT (Kg)
	A	B	W	H	C	D	
906	300	217	261	170	36	87	1.5
1206	376	217	337	170	36	87	1.7

3510	960	319	921	271	63	138	7.5

Volume Equalising Deflector

Suitable for installations with short stub ducts and high air velocities in the main branch. The two sets of blades can be individually adjusted to give an even velocity distribution and can be adjusted for volume control.

For easier volume control, an opposed blade damper can be supplied in addition to the VED.

	NC					18	25	30	33

Throws

Jet throws are based on isothermal conditions to a terminal velocity of 0.25m/s with straight vanes. Throws should be corrected in accordance with the following table to compensate for vane angle adjustments.

VANE ANGLE	0°	5°	10°	20°	30°	40°	60°
THROW FACTOR	1.0	0.9	0.82	0.68	0.6	0.52	0.4

Noise Levels

Noise data is expressed in terms of NR level with a room absorption factor of 8db.

Selection Example

DJ 2406 Drum Jet supplying an air flow rate of 400 l/s.

Throw: 17m
Pressure Drop: 45Pa
Noise Level: NR26
